Educause Leadership Strategies, Computer and Network Security in Higher Education Mark A. Luker, Rodney Petersen, 2003-10-15 Computer and Network Security in Higher Education offers campus leaders and IT professionals an essential resource for determining the most technically viable cost effective and culturally appropriate approaches for securing college and university computers and networks The book includes the information needed to establish and enforce effective policies create strategies that will help secure information resources and put in place an organization that can provide leadership expertise and real time incident response This important resource provides guidelines for improving computer and network security in an academic environment and includes Practical ideas for finding resources and establishing leadership for security A discussion about the changing role of the IT security officer Suggestions for conducting a security assessment and risk analysis A review of an institution s legal liability Recommendations for developing cyber security policies and procedures Information about an array of technology tools for enhancing security Ideas for raising awareness campuswide about IT security Cybersecurity Teaching in Higher Education Leslie F. Sikos, Paul Haskell-Dowland, 2023-06-16 This book collects state of the art curriculum development considerations training methods techniques and best practices as well as cybersecurity lab requirements and aspects to take into account when setting up new labs all based on hands on experience in teaching cybersecurity in higher education In parallel with the increasing number and impact of cyberattacks there is a growing demand for cybersecurity courses in higher education More and more educational institutions offer cybersecurity courses which come with unique and constantly evolving challenges not known in other disciplines For example step by step guides may not work for some of the students if the configuration of a computing environment is not identical or similar enough to the one the workshop material is based on which can be a huge problem for blended and online delivery modes Using nested virtualization in a cloud infrastructure might not be authentic for all kinds of exercises because some of its characteristics can be vastly different from an enterprise network environment that would be the most important to demonstrate to students The availability of cybersecurity datasets for training and educational purposes can be limited and the publicly available datasets might not suit a large share of training materials because they are often excessively documented but not only by authoritative websites which render these inappropriate for assignments and can be misleading for online students following training workshops and looking for online resources about datasets such as the Boss of the SOC BOTS datasets The constant changes of Kali Linux make it necessary to regularly update training materials because commands might not run the same way they did a couple of months ago The many challenges of cybersecurity education are further complicated by the continuous evolution of networking and cloud computing hardware and software which shapes student expectations what is acceptable and respected today might be obsolete or even laughable tomorrow **Cybersecurity Education for Awareness and Compliance** Vasileiou, Ismini, Furnell, Steven, 2019-02-22

Understanding cybersecurity principles and practices is vital to all users of IT systems and services and is particularly relevant in an organizational setting where the lack of security awareness and compliance amongst staff is the root cause of many incidents and breaches. If these are to be addressed, there needs to be adequate support and provision for related training and education in order to ensure that staff know what is expected of them and have the necessary skills to follow through. *Cybersecurity Education for Awareness and Compliance* explores frameworks and models for teaching cybersecurity literacy in order to deliver effective training and compliance to organizational staff so that they have a clear understanding of what security education is, the elements required to achieve it, and the means by which to link it to the wider goal of good security behavior. Split across four thematic sections considering the needs of users, organizations, academia, and the profession respectively, the chapters will collectively identify and address the multiple perspectives from which action is required. This book is ideally designed for IT consultants and specialist staff, including chief information security officers, managers, trainers, and organizations.

The National Higher Education and Workforce Initiative Business-Higher Education Forum, 2014

The Business Higher Education Forum (BHEF) has achieved particular success in operationalizing the National Higher Education and Workforce Initiative (HEWI) in Maryland around cybersecurity. Leveraging its membership of corporate CEOs, university presidents, and government agency leaders, BHEF partnered with the University System of Maryland to build a system-wide response to the state's and nation's cybersecurity workforce challenges. BHEF's work in Maryland illustrates that it is indeed possible to effect swift, significant change and innovation in higher education with the goal of better aligning curricula and student outcomes with needed workforce skills. This pace of change hinges on the genuine commitment, expertise, and investment of resources by motivated stakeholders. This case study describes how the Maryland regional initiative, as part of HEWI, operationalizes and implements the BHEF strategies.
